

Project Report/May 2023

StoPox WL 100/150 keep things moving in the Belgian soccer canteen

In the youth canteen of the Belgian first division club KVC Westerlo in the Belgian province of Antwerp, the water-based paints StoPox WL 100 in combination with StoPox WL 150 transparently show their sporty side: The pillars in the premises are decorated with dynamic silhouettes of the soccer players " in action" and give a special, sporty ambience.

StoPox WL 100 and **StoPox WL 150 transparent** are EP water-based paints. They are permeable to water vapour, can be diluted with water, adhere very well to the substrate, have low VOC emissions and are very easy to clean.

As part of the overhaul work, the canteen floor was given a new coating with StoFloor Industry MS 200. The water-based epoxy resin sealing system is low-emission and has a matt appearance. It is particularly suitable for commercial and public areas. Its surface convinces with a good cleanability. With mechanical and chemical resistance, the system has very good water vapour permeability. This means that StoFloor Industry MS 200 is ideal for use on both concrete substrates and cement screeds with rearising damp.

Properties of StoFloor Industry MS 200

- StoCretec EP sealing system, water-based
- For floors, walls, and ceilings in public and commercially-used areas
- For overcoating of old load-bearing, hard EP and PUR coating
- Mechanically and chemically resistant
- Very good ease of decontamination
- Good cleanability in accordance with StoCretec care recommendations
- For concrete, cementitious screed and calcium sulphate screed substrates
- Very good water vapour transmission rate

- Low-emission and free from benzyl alcohol
- Tested system-build-up with voluntary external monitoring

The investor also chose Sto for his repair project:

The solution from a single source.

Floors and columns were given the StoCretec coatings described above.

The interior acrylate paint **StoColor Opticryl Matt** was used for the ceilings and walls. The paint has been tested for harmful substances, has a dull matt appearance and is free of solvents and plasticizers. In addition, it is free of fogging-active substances and harmless to food. The interior paint has good opacity and a high degree of whiteness.
