

Project Report/November 2025

StoFloor Comfort Elastic BB 100 for a unique and modern shopping experience

Globero is one of the leading importers and marketers of outdoor and indoor furniture as well as home and garden accessories in Hungary. The company recently opened a third business location with a showroom in the Budaörs region of Hungary.

Globero aims to create a unique shopping experience at its new beachfront location. To meet the high standards of aesthetics and quality in the approximately 1,600 square metre showroom, the developer opted for the visually appealing **StoFloor Comfort Elastic BB 100** flooring system.

The decorative StoCretec comfort floor coating is particularly recommended for these types of high-traffic floors in retail and showroom spaces. The system is durable, resistant, easy to clean, and yet very stylish. The elastic material offers excellent walking comfort and footstep sound insulation. It is also resistant to mechanical stress, scratch-resistant, and suitable for castor chairs. The system boasts high UV-resistance and a wide range of colour shades for individual freedom of design.

Seamless across a large area: The coated floor surface is particularly attractive because there are virtually no joints. An added benefit? **StoFloor Comfort Elastic BB 100** is easy to clean thanks to this and its homogeneous surface. The silver-coloured StoChips incorporated in the showroom's floor coating not only create a modern and sophisticated look, but also provide slip resistance class R9 for safe walking even when damp.

To further enhance this look, the specialist applicator opted for an additional UV-resistant sealing coat applying StoPur WV 202 transparent matt.

Properties of **StoFloor Comfort Elastic BB 100**

- StoCretec PUR coating build-up
- For sales and exhibition rooms

- For recreational and social rooms
- In care facilities, nursery schools, and in day-care centres
